# Remarks

#### Introduction

Receipt is acknowledged of the Office Action dated November 21, 2000. In the Action the Examiner has rejected claims 21-24 and 39-103 under alleged non-enablement. The Examiner has also rejected claims 21-24 and 39-103 as allegedly indefinite.

By the foregoing amendments, Applicants have amended claims 21-24 and no claims have been added or canceled. Consequently, claims 21-24 and 39-103 are pending for the Examiner's reconsideration. In this regard, reconsideration and withdrawal of the outstanding rejections in view of the foregoing amendments and remarks set forth below is respectfully requested.

## Claim Rejections under 35 U.S.C. § 112, first paragraph

On page 2 of the Office Action, the Examiner has rejected claims 21-24 and 39-103 under 35 U.S.C. § 112, first paragraph under alleged non-enablement. Specifically, the Examiner asserts that prophylaxis of several diseases recited in claims 23 and 24 is not disclosed. Applicants respectfully traverse the rejection.

Without acquiescing in the statements as set forth in the rejection, and solely for the purpose of expediting the instant application, Applicants have amended claim 23 to recite treating. One of ordinary skill in the art would understand "treating" to include the suppression of reoccurrence of diseases or disorders. An example would be the suppression of reoccurring instances of asthma attacks. Applicants have also amended claim 24 to recite "inhibiting adhesion and/or migration of leukocytes." No new matter is added with these amendments. Accordingly, reconsideration and withdrawal of the rejection is respectfully requested.

## Claim Rejections under 35 U.S.C. § 112, second paragraph

On page 3 of the Office action, the Examiner has rejected claims 21-24 and 39-103 under 35 U.S.C. § 112, second paragraph as allegedly indefinite. Applicants presume that the Examiner asserts that the definition "free functional groups and/or where free functional groups can be protected by protective groups customary in peptide chemistry" for R<sup>6</sup> is indefinite. The Examiner also pointed out typographical error in claim 22.

Without acquiescing in the propriety of the rejection, and solely for the purpose of expediting prosecution of the instant application, Applicants have amended the definition of R<sup>6</sup> in claims 21-24 to recite, in part, "optionally protected free functional groups." Applicants submit that this term is clear to one of ordinary skill. Applicants have also made minor claim amendments to correct typographical errors. Applicants submit that the claims distictly describe the instant invention. Accordingly, reconsideration and withdrawal of the rejection is respectfully requested.

#### Conclusion

In view of the foregoing remarks, reconsideration of the application and allowance of all claims is requested. If there are any issues remaining which the Examiner believes could be resolved through either a Supplemental Response or an Examiner's Amendment, the Examiner is respectfully requested to contact the undersigned at the number below.

Respectfully submitted,
